

AUSTRALIAN NATIVE ¹⁹⁻¹⁻¹⁶

Baileys Australian Native Blend is a low phosphorus, 5-6 month controlled release nursery and landscape fertiliser. It is derived from a blend of polymer coated NPK, slow release urea and potassium sulphate. Suitable for all plants requiring potassium and nitrogen, particularly phosphorus sensitive species.

APPLICATION RATES

Top Dress	30g/m ² to landscapes
Incorporation	5kg/m ³
Potted Plants	5g per 140mm Pot 10g per 200mm Pot 30g per 300mm Pot

Consult your Baileys representative for further details.

LOW P FORMULA

Ideal for phosphorus sensitive species, Australian Native Blend was developed for growers of the Proteaceae family, including species such as Banksia, Grevillea and Hakea.

HIGH POTASSIUM

The high potassium quality makes plants more robust, improves frost, disease and drought resistance and increases water use efficiency.

ADVANCED COATING

Polymer coated component ensures precise release of nutrients via diffusion, regulated by soil temperature. It is unaffected by soil moisture, pH and microbial activity.

AVAILABLE: 20KG & BULK BAG
