

# INJECT GROSORB<sup>®</sup>

A premium, non-ionic, block co-polymer penetrant surfactant, specifically designed for injection into irrigation, fertigation and boom spray systems. High frequency, low rate application through irrigation is economical and highly effective for large area treatment.

## APPLICATION RATES

Rate/100m <sup>2</sup>	Rate/Ha	Frequency
40-80ml	4-8L	2-4 weeks

Inject as part of normal irrigation cycle. For maximum efficiency and dispersal, inject in the middle of the irrigation period to allow for pre-wetting of the soil and watering in after the injection period.

**AVAILABLE: 20L, 200L, 1000L**

### LOW VISCOSITY

Designed for easy, regular incorporation with irrigation water to provide consistent dilute application of wetting agent to turf surfaces.

### IMMEDIATE ACTION

High quality and concentrated surfactants provide immediate water infiltration to eliminate surface pooling, run-off and water loss through evaporation. Provides a curative action to dry patch and quick green-up.

### SUPERIOR REWETTING

Proprietary surfactant blend maximises irrigation performance, ensuring faster and long lasting entry of water through the turf thatch zone and soil surface. Delivers a uniform draining surface for large turf areas.
