

LIQUID FISH & FULVIC ACID

2.5% N, 0.3% P, 0.3% K, 0.5%Ca + 2% Fulvic Acid

PRODUCT DESCRIPTION

Baileys Liquid Fish Extract with added Fulvic Acid is an organic liquid fertiliser made from bi-products of fish. It is manufactured using a low temperature, natural enzyme process to ensure that the nutrients, growth promoters and trace elements are retained.

It is a powerful natural fertiliser and soil amendment that is suitable for a wide variety of plants and crops. It contains the major nutrients nitrogen, phosphorus and potassium plus valuable trace element, growth hormones and organic matter.

BENEFITS

The added fulvic acid will assist nutrient uptake, promote plant growth, act as a soil buffer against pH fluctuation and improve plant resilience. Fulvic acid is a naturally occurring organic product derived from humus; an active component in soils.

Baileys Liquid Fish extract can be applied both as a foliar or ground application and is suitable for use in fertigation.

This is an organic, renewable resource that is environmentally friendly.

APPLICATION RATE

Application	Litres per Ha	Recommended Frequency	Dilution
Turf	20-40lt	Use as a plant or soil conditioner 3-4 times per year.	400 - 1000 litres water
Pasture	20-40lt		400 - 1000 litres water
Horticulture Crops	20-40lt		400 - 1000 litres water
Viticulture	10-20lt		200 - 500 litres water
Citrus	20-40lt		400 - 1000 litres water

CAUTION

Nutrients can stain walkways and will need to be washed off prior to irrigation.

Keep away from water sources such as ponds, pools etc.
