

WATCH HOW TO

4.1.1.

Lawn Food

Baileys 4.1.1. lawn food contains different forms of nitrogen to produce excellent colour and growth year-round.

It is the ideal lawn fertiliser for those wanting one product suitable for application in every season. 4.1.1. lawn food contains nutrients specifically selected for WA soil, for the best local lawns.

APPLICATION RATE

Rate/m ²	Frequency
25-50 grams	6-8 weeks

Calculate the required amount of fertiliser

Rate x Lawn Area in M²

Apply evenly by hand or spreader.
We recommend applying with a fertiliser spreader for even coverage.
Water in well.

8KG TREATS UP TO 320M²

4 SEASONS OF GREEN

Contains slow release urea and ammonium nitrate. These fertilisers are converted to plant available nitrogen at different rates, making them more effective in different seasons.

FAST ACTING

The nutrients in 4.1.1. solubilise and work into lawns quickly to boost growth and colour. Ammonium nitrate is converted to plant available nitrogen more readily in cooler months to maintain winter colour.

HIGH IN TRACE MINERALS

A quality analysis of iron and trace minerals boosts lawn health, colour and disease resistance. All essential nutrients for WA soils are provided.
